Input Parameters

| NOMINAL INPUT VOLTAGE RANGE | $94.4-240 \mathrm{VAC}$ or $133 \mathrm{VDC}-328 \mathrm{VDC}$ |
| :---: | :---: |
| MAX. INPUT VOLTAGE RANGE | $85-264 \mathrm{VAC}$ or $120-360 \mathrm{VDC}$ |
| INPUT FREQUENCY | $47-63 \mathrm{~Hz}$ |
| MAXIMUM INPUT CURRENT | 16 AMPS or 11 AMPS DC |
| INRUSH CURRENT | $<50$ AMPS |

## Output Parameters

Adjustment and Derating
The Alpha 1000 series is designed to provide a max output power of 1000 W at nominal output voltages. The following procedure must be used to ensure the PSU is operated within its ratings: voliages. The following procedure must be used to ensure the PSU is operated within its ratings
a $\quad$ Calculate the user for power for each module (Volts $x$ Amps).
Total Total power for slots $1-3$ must be $\leq 720 \mathrm{~W}$. Total power for slots $4-7$ must be $\leq 60$
Total power (slots $1-7$ ) not exceeding value stipulated in unit limitations table Calculate user ampere turns (Amps x turns) for each module.
d Add total ampere turns: Slots $1-3 \leq 120$. Slots $4-7 \leq 120$. Total of slots $1-7 \leq 200$ AT.

| Modules | Note | Output Range (*11) | Current | Slots | Turns | $\begin{gathered} \text { Max Current } \\ \text { Limit } \end{gathered}$ | Settings for hazardous energy |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Module Limitations

For $B, B B, Q, L$ and $Z$ modules in slot 7 , max output current is 15 A .
For D and E modules in slot 7 , max output current is 5 A
For $G$ modules in slot 6 \& 7 , max output current is 15A.
For C, CH, CL, CM modules in slot 7 , max output current is 10 A .
For S modules in slots 5 and 6 max output current is 77 A and in slots 6 and 7 max utput current is 67A.
or C and CH modules the max output current is 12 A for output voltages $>12 \mathrm{~V}$ For $J$ modules the output current derates linearly by 0.25 A per volt above 40 V . For H and N modules with output $>29 \mathrm{~V}$, max output current is 1 A
When using remote sense, the max output voltage will be reduced by 0.5 V for $\mathrm{L}, \mathrm{S}, \mathrm{T}$ Q and R modules, and by 1.0 V for $\mathrm{C}, \mathrm{CH}, \mathrm{CL}, \mathrm{CM}, \mathrm{D}, \mathrm{F}, \mathrm{G}, \mathrm{J}, \mathrm{M}, \mathrm{K}, \mathrm{N}, \mathrm{U}$ Modules.
Ampere turns for $J$ module is calculated as $A T=($ output current +15 A ) $\times 4$.
11 Adjusting output voltage beyond the stated range may cause overvoltage protection
(OVP) to operate, whereby all outputs will turn off. To reset OVP, turn back output voltage adjustment and remove the mains supply fpr 30 seconds.

Important safety Instructions

## ervicing

These products are not customer serviceable. Repairs may only be carried out by TDK-Lambda imited or their authorised agents. These products are not authorised for use as critical components in nuclear control systems, life support systems or equipment for use in hazardous environments withou he express written approval of the Managing Director of TDK-Lambda Limited

## nergy Hazards and SELV

Certain modules are capable of providing hazardous energy (240VA) according to output voltage set ng. Final equipment manufacturers must provide protection to service personnel against inadverten contact with these module output termina. If set such that hazardous energy can occur then the module terminals or connections must not be user accessible.

Approval Limitations: Use in North America (AC units only)
When this product is used on 180VAC-250VAC mains with no neutral, connect the two live wires to L (live) and N (neutral) terminals on the input connector. In this instance double pole fusing is required.

## ligh Voltage Warning

Dangerous voltages present within the power supply. Do not remove covers.

## xternal Hot Surfaces

Section 6 of the Health and Safety at Work Act requires that manufacturers have an obligation to protect service engineers as well as users. In order to comply with this, a label must be fitted to thes products which is clearly visible to service personnel accessing the overall equipment, and which egibly warns that surfaces of these products may be hot and must not be touched when the products are in operation

## Safety Earthing Screw

On products with an enclosure, special safety earthing screws are used which connect the cover to he chassis. They must not be removed.

## Safety Class of Protection

These products are designed for the following parameters : Material Group IIIb, Pollution Degree 2 Overvoltage Category II, Class 1 (earthed), Indoor use as part of an overall equipment such that the product is accessible to service engineers only.
Unit Limitations

## Environmental parameters

## Operation

Temperature 0 to $50^{\circ} \mathrm{C}$ (derating $2.5 \%^{\circ} \mathrm{C}$ above $50^{\circ} \mathrm{C}$ to $65^{\circ} \mathrm{C}-$ Not covered by approvals). Humidity 5 to $95 \%$ RH non-condensing. Air Pressure 70 kPa to 106 kPa .
Altitude -200 m to 3000 m
Storage and Transportation
Air Pressure 54 kpa to 106 kpa . Altitude -200 m to 5000 m
Vibration and shock
$10-200 \mathrm{~Hz} @ 1.5 \mathrm{G}$ sinewave, 20 G for 15 minutes in 3 axes random vibration / 3000 bumps, 10 G ( 16 mS ) half sinewave.
Cooling
These units may be mounted in any of 4 orientations: Horizontal, on either side or vertical with airflow upwards. The airflow around the power supply air inlets and outlets must not be impeded when it is fitted in the end use application

Level of insulation
Dielectric Strength testing is carried out as follows: Primary mains circuit to earth - $2.25-2.35 \mathrm{kVDC}$
Primary mains circuits to transformer core $-4.25-4.35 \mathrm{kVDC}{ }^{*}$
Outputs to each other and to earth are isolated to 500 vo
*This test is not possible with modules fitted to the unit as damage to RFI capacitors will occur)

## General installation instructions

The Alpha family of component power supplies is designed for use within other equipment or enclosures which restrict access to authorised competent personnel only. For safe installation and operation of this product, carefully follow the instructions listed below:
i) The unit covers/chassis are designed to protect only skilled personnel from hazards and must not be made user accessible
not the made user accessible.
ii) These products are Class 1 and must therefore be reliably earthed and professionally installed in accordance with the prevailing electrical wiring regulations and the safety standards covered
herein.
iii) These products are IPX0 and chemicals/solvents, cleaning agents and other liquids must not be used.

## Special Instructions for medical applications (IEC/EN/UL/CSA60601-1)

## Applicable to products with IL RL and TL filter options only.

Applicable to products with LL, RL and TL filter options only. 1) These products are designed for continuous operation within an overall enclosure, and must be
mounted such that access to the mains terminals is restricted. (Clause 16, IEC/EN/UL/CSA60601-
1)
ii) These products are NOT suitable for use in the presence of flammable anaesthetic mixtures wiii) These wroducts are with nitrous oxide. - equipment and NOT protected against the ingress of water iv) Connect only apparatus complying with IEC/EN/UL/CSA60601-1, to the signal ports. v) Except for permanently installed equipment as defined in Clause 57.6 of IEC/EN/UL/ CSA60601-1, the overall equipment in which these products are installed must have double pole fusing on the input mains supply or DC supply as appropriate. The products themselves have single pole fusing in the live line or positive DC line as appropriate
vi) Reference should be made to local regulations concerning the disposal of these products at the end of their useful life.

## Mechanical parameters

DO NOT USE MOUNTING SCREWS WHICH PENETRATE THE UNIT BY MORE THAN 4.5 MM Weight 3 Kg dependent upon configuration
